

### Academics

- School: York University
- GPA: 3.60-3.79
- Program: Nursing
- MCAT: 9-10 (V), 9-10 (P), 9-10 (B), P(W)

### Extracurriculars

- Worked as a nurse for 2 years
- Hospital volunteering and shadowing
- No research activity

### Goals

- Medical school admission, applied once before without success

### Diagnosis

- Moderate MCAT and GPA, non- traditional background (no research, not a typical life science applicant).

### Plan

- Focus on creating a more “medicine oriented” application

### Approach

- Student approached us 6 months before the application deadline. We suggested research projects for the student to pursue which turned out to be quite successful in

that 6 month period. He made even more progress between the time periods between application submission and interviews.

- We extensively edited his personal essay and autobiographical sketch to highlight nursing experiences. Specifically, we discussed how his nursing experience made him a unique candidate with greater experience in patient care compared to other applicants. The arguments were quite convincing.
- In addition, he received multiple mock interviews that were tailored for specific schools with detailed feedback.

### Result

- Attended McMaster University medical school
- Continues to be mentored by MD Consultants during medical school
